Dr. Earth Insecticidal soap

Diatomaceous Earth

Air Flow

If the leaves of your plants are not swaying with a slight breeze, your garden is not getting good air circulation. Lack of air flow causes too much moisture which can lead to fungus, mold, and insect problems.

Nearby walls, hedges, and other tall structures should be taken into account when laying out your garden. These will not only block light, they also cut off breezes. Make sure there is plenty of room between these structures and your plants.

Moisture Control

Potting soils with perlite added
- Horrocks Pro Potting
- Fox Farm soils
- Black Gold soils
